

## Maximum weight – max. gross weight CUBE Bikes

Dear CUBE Partner,

We always do our best to design lightweight safe bicycles. With a restriction of the gross weight we want to ensure that a lightweight bicycle can meet its requirements. The gross weight equals the combined weight of: The bike itself, the rider and all other items carried by the rider or the bike.

### Example:

Bicycle	15,0 kg
+ Rider	75,0 kg
+ Backpack	2,0 kg
+ Drinking bottle	0,5 kg
-----	
<b>= Gross weight</b>	<b>92,5 kg</b>

The following gross weights should not be exceeded on a CUBE Bike:

Model	max. Gross weight
Mountainbike	115 kg
Road Bike	115 kg
Cross Bike	115 kg
City	125 kg
Trekking	140 kg
Kid Bike (20", 24", 26")	105 kg
Kid Bike (16")	60 kg

This gross weight table is for all **bicycle frames** made by CUBE, regardless of material or frame size.

More often than not the components are the restricting factor for gross weight limit and not the frame. Therefore, other weight limitations (e.g. for lightweight handlebars and wheel sets) have to be considered.

If the gross weight is higher than the recommended limit it may be necessary to change parts like:  
**Lightweight or Carbon forks, wheel sets, handlebars, stems and seat posts.**

We consider it extremely important that our customers are informed well about this topic and strongly recommend in the case of any doubt your contact CUBE service directly.

For further questions please contact our technical support or in-house customer service.

Best Regards,

Your CUBE Team
